

AI-Powered Real-Time Monitoring

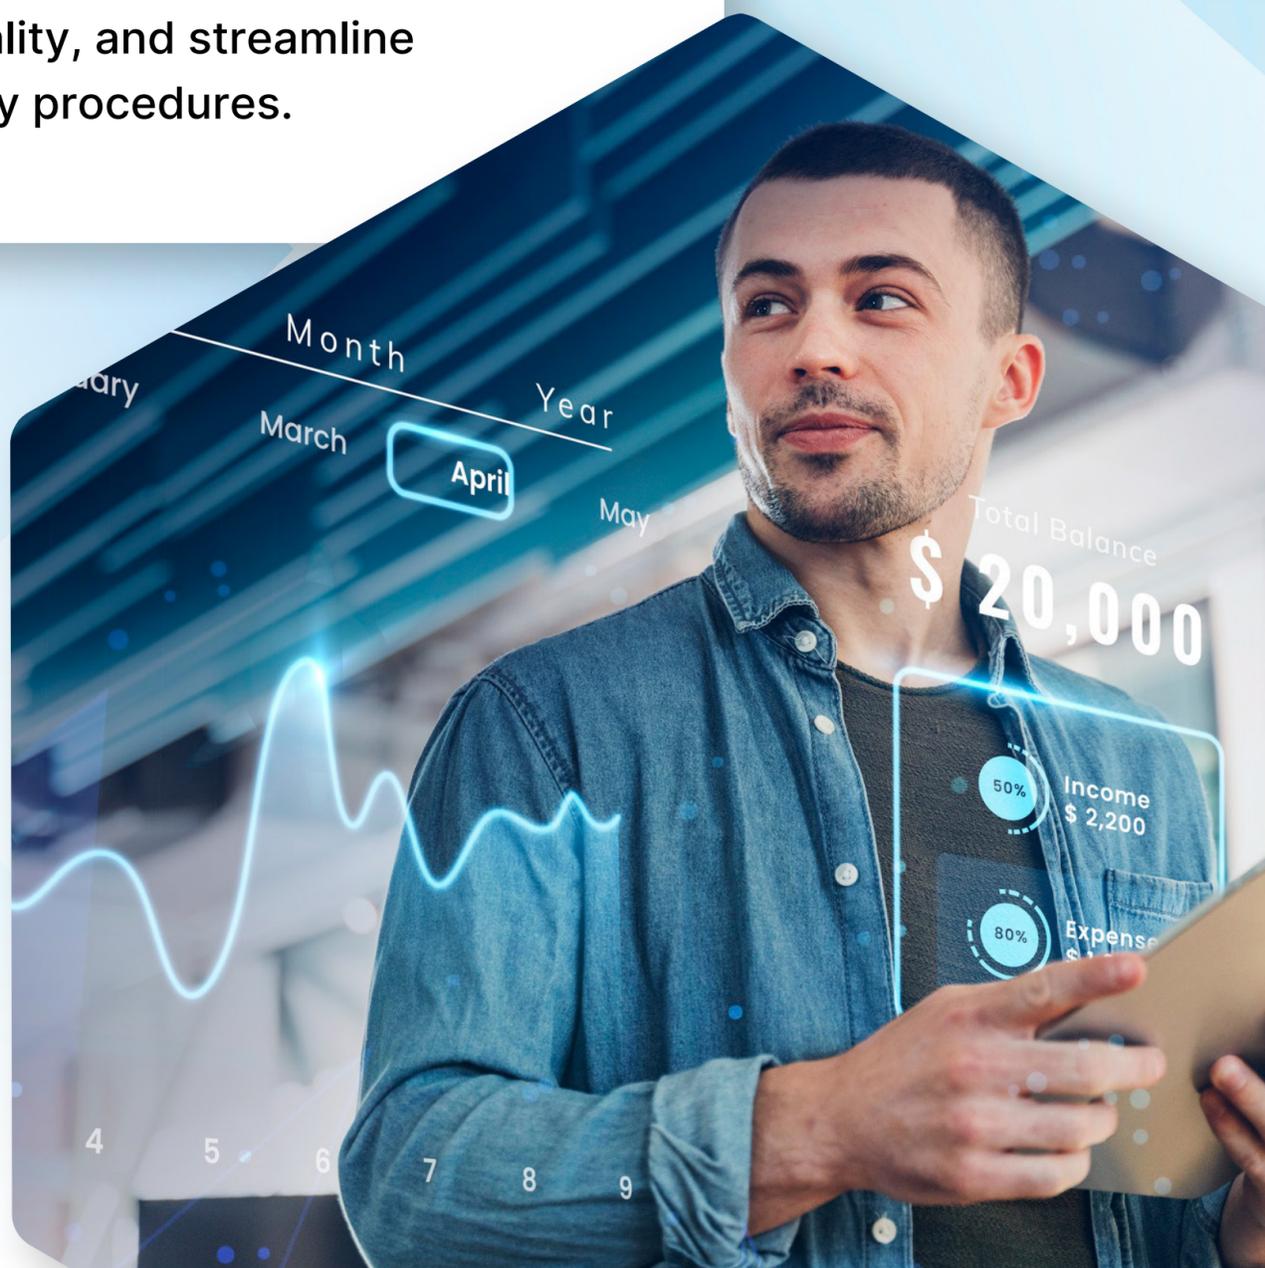

Leverage the power of AI and Smart IoT technology to enhance quality control, security, and worker safety. Our computer vision solutions include state-of-the-art AI models such as YOLO-based detection systems, Segmentation models for precise task segmentation, Vision Transformers for behaviour analysis, and specialized vision-language models for comprehensive facility monitoring. This sophisticated system provides advanced real time monitoring capabilities to automate routine processes, improve product quality, and streamline adherence to security and safety procedures.

BLACKSTONE EIT

BlackstoneeIT is an SI and ISV leader providing innovative customized technology solutions to help our customers become digital-first, data-informed, and AI-enabled companies.

2025

Highlights :

Product Quality Control:

Leverage AI and Smart IoT technologies to automate routine quality control processes and enhance product quality.

Improved Worker Safety:

Implement computer vision technology to ensure adherence to workers' safety procedures, enhancing overall workplace safety and reducing the risk of accidents and downtime.

Improved Security:

Implement advanced computer vision technology for real-time threat detection, enabling swift responses to security breaches and protecting your assets.

Custom Solutions: Tailored real-time monitoring solutions to address your unique needs and achieve your desired business outcomes.
